1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 40-64 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hood. Hood discloses most of the elements of the claims. Compare, for example, Fig. 2 of Hood with Fig 1 of the subject application wherein both structures can be viewed from a similar perspective. Thus Hood can be seen to have first and second surfaces extending as claimed, in the same manner applicants Fig 1 may be said to have those surfaces. Note especially the top or middle portions or lower portions of Fig 2 of Hood. These surfaces may be said to define the Hood cutting edge in the same manner as applicants corresponding surfaces may be said to define the claimed cutting edge.

However, Hood does not teach that the first and second straight portions (top of Fig 2) are angled with respect to each other and to the body axis. On the other hand it is conventional to angle straight portions of cutting edges as claimed. Accordingly, it would have been obvious to angle the straight portions of the hood cutting edge as claimed for the purposes of better adapting the tool to cut specific structure.

3. Applicant's arguments filed 1/16/08 have been fully considered but they are not persuasive. Applicant argues that Hood does not show angled first and second straight portions. That issue is dealt with above. Applicant also argues that the relevant portions of Hood are not "straight" as encompassed in the claims because of the serrations. This argument is not convincing for the following reasons. The specification does not define "straight" as urged by applicant. Moreover, and in any event, limitations from the specification can not be read into the claims, even though the claims are read in light of the specification. Third, Hood clearly shows how serrations do not preclude straight portions. The cutting edge of Hood in fact has two straight portions connected by a curved portion at the very top, the presence of the serrations notwithstanding. Finally, the examiner believes that it could be found obvious to delete serrations if that became necessary for a rejection of the claims. Not having serrations on a cutting edge is another of those expedients that is quite well known in the art. Note, for example, the other references of record.

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
